

Vitamin E for clear beverages

We have the ready-to-use Solution:

Solu™ E 200

The market for flavoured or enhanced waters is the fastest growing segment within the strong growing bottled water category.

- Planning to enter the near water market?
- Extending your range of enhanced waters?
- Is beverage clarity and stability important to you?

In order to match the appearance of plain mineral water, ingredients added need to be colourless and clear. By using Solu™ E 200* the essential antioxidant Vitamin E can be added to your new innovation without compromising on beverage clarity, stability and taste.

Beside clear watersoluble B-Vitamins and Vitamin C, regular Vitamin E products add turbidity to beverages and are not suited for flavoured or enhanced waters. With Solu™ E 200 a clear, colourless fortified beverage is obtained even at high Vitamin E levels.

Solu™ E 200 is a slightly viscous liquid that is produced using solubilisation technology. It's ready-to-use and can be added directly to your beverage without a pre-dispersion step.

Characteristics of Solu™ E 200:

- Superb clarity even at high Vitamin E levels
- Good long-term stability in beverages – no ringing, no turbidity
- No ringing in turbid beverages such as functional juices
- Ready-to-use and stable liquid
- GMO-free and based on non-allergenic ingredients (according to dir. 2000/13/EC)
